

THE COVID

PLANET

From April 1, 2024:

TILTING AT WINDMILLS - #10 e - Quality Control - Doctor, there's a monkey cancer in my Covid soup??

Regarding McKernan's thorough research which suggested that nobody ever should take any mRNA experimentals, Jeff Childers' Substack goes on to say: More tests are needed, and justified, and Kevin McKernan says they are coming.

If you're interested in reading more, I also relied on [Rebekah Barnett's](#) more comprehensible Substack takedown of Kevin's (2024)post, titled "[DNA contamination in Covid vaccines DOES get into human cells, new evidence shows.](#)"

I think this is the most promising line of research going in terms of helping establish Covid manufacturers' liability. If genetic integration is proven, it will bring the entire odious pharma crack house right down on their heads.

From AI - Article Factory: Uncovering Contamination: The McKernan Case -- *everything from AI I have italicized*

In recent weeks, concerns have arisen regarding the contamination of human cells by certain batches of the Covid-19 vaccine. The case that brought this issue into the spotlight involves renowned scientist Dr. Aiden McKernan, who discovered traces of foreign genetic material in several samples from vaccinated individuals.

Research Reveals Alarming Findings

Dr. McKernan, a leading expert in molecular biology, conducted meticulous research analyzing post-vaccination samples under high-powered microscopes and sequencing techniques. His aim was to investigate any possible long-term effects or adverse reactions related to the administration of Covid vaccines.

The Presence of Foreign Genetic Material

To his surprise, Dr. McKernan found foreign genetic material within human cells obtained from vaccinated individuals' blood samples instead of solely viral protein components specific to SARS-CoV-2 as would be expected with an mRNA-based vaccine like those developed by Pfizer-BioNTech or Moderna.

McKernan discovered that Simian virus, which is something that should have been foreign to all manufacturing processes was present in blood and tissue samples of vaccinated individuals. That virus is oncogenic, which means cancer-promoting. Does anyone remember that Pfizer shut down production in a facility near Baltimore? The following is just a vignette of what is a global problem, and WHO and the vax manufacturers knew about it. Remember the virus was released from a non-compliant, unsanitary laboratory in Wuhan. The simian virus could have been left-over from another experimental process.
